Subject Ellsworth Vapor Intrusion Analysis

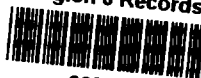

Rick/Wendy/Jim,

I wasn't sure if my previous message went through (I'm sending from my home computer today). The Ellsworth vapor intrusion analysis was distributed yesterday. After reading it, please let me know if you have any questions. Briefly, we found negligible risk using the highest concentrations found in the residential and monitoring wells in the area. All of the calculated risks were lower than the VI guidance's recommended level of 10-5. IEPA's VI analysis on residential homes near Lockformer is also included. Our findings are similar.

More importantly, Tom Krueger and I would like to know if we have the go ahead to pursue a cashout settlement with the PRPs using the figures we discussed during the 2/1 meeting. We're meeting with the PRPs on 2/23 and would like to have this issue resolved before then. Please let me know if you would like to meet on this issue. I will in all week except Monday (2/14). Thanks!

Ross, 6-6195
